

TRANSPOSITIONS

TRANSPOSITIONS

In mathematics transpositions are permutations of a set of elements that interchange two elements and leaves the remaining elements in their original position. We like to think that the world of math and the world of design have little in common but the truth is that when these two disciplines come together magic happens. The Transpositions collection is a versatile and dynamic set of PDI tile designs that can transform any space into an interchangeable design landscape. Bold, sweeping hospitality designs are partnered with the convenience of tile in an array of patterns that can be installed to create a one of a kind installation.

Synthesis by Durkan is an innovative, patented breakthrough in carpet technology. The proprietary Synthesis process layers pattern and texture to provide unprecedented 3D image quality and clarity. Never before has this combination of patterning and textural effect been achieved in hospitality flooring. The result is a unique layering effect that brings tremendous depth and richness to carpet design.
